

Halifax Stanfield International Airport

When it comes to Intercom; Dealers come to TOA because TOA is a recognized Leader in the Intercom industry.

When the Halifax Stanfield International Airport announced the major terminal expansion, they needed to find a solution to communicate throughout the airport from the interior/exterior doors to the Security Operation Center (SOC). The Halifax Stanfield International Airport is Atlantic Canada's full-service airport. More than 3 three million passengers pass through this airport each year, making it Canada's seventh largest airport.

The expansion at the Halifax Stanfield International Airport created an opportunity to update and replace an existing, out of date, intercom system. The airport was looking for a complete system that included an IP Network Intercom system that could be integrated with their existing platform. Chubb Security Systems, a world leader in electronic security systems and services, would be faced with the challenge of finding and installing a true IP Intercom system. Upon review of many Intercom Systems, Chubb Security Systems discovered that TOA's IP Network Intercom System was the complete communication solution for the airport.

Mr. Stephen Beaton, Project Manager, Chubb Security Systems, choose TOA's IP Network Intercom System to fit the airports needs because the system provided a true IP Network, while allowing the substations to also be wired. Chubb installed 300 substations, master and door stations and exchange stations throughout the airport. "Of all the security systems we installed at the Halifax Stanfield International Airport, TOA's IP Intercom was the least problematic" stated Mr. Beaton.

According to Mr. Beaton, TOA's IP Network Intercom System has delivered an overwhelming experience to Halifax Stanfield International Airport. In fact, when the airport welcomed the U.S. Preclearance, they again installed TOA's IP Network Intercom. TOA's IP Intercom was chosen for the project because it provided straightforward communication throughout the airport; was easy to use and install; and had excellent clarity and reliability.

Chubb Security did not require a lot of support for the system, but when they required training on TOA's IP Network Intercom, TOA hosted a training session in their head office in Mississauga, Ontario, for Chubb. Mr. Beaton was impressed with the level of service they received from TOA and their Technical Department.

"TOA's product did not pose an installation challenge for Chubb Security Systems" remarked Mr. Beaton. "We were very impressed with the ease of use and installation and how well TOA's IP Network Intercom System fit into the Halifax Stanfield International Airport."
