

## Portable Conferencing Made Easy with TOA's TS-900/800 Infrared Wireless Conference System

Without a permanent facility, the Sicamous District Council and Chamber of Commerce were looking for a conferencing system that would suit their ever changing facility and their needs. With specific functionality requirements in mind, the Sicamous District Council and Chamber of Commerce embraced TOA's TS-900/800 Infrared Wireless Conference System.

Blue Water Music, located in salmon Arm, BC, specializes in the custom installation of professional audio/visual equipment, found in professional venues in the home environment. Known for being a musical instrument store, John Guilbeault, Owner of Blue Water Music, is frequently awarded with professional installations for venues such as the Sicamous District Council and Chamber of Commerce.

Sicamous District Council and Chamber of Commerce needed a conference system that was portable with the ability to change the room set up and add additional units if required in the future. Blue Water Music found that TOA's TS-900/800 Infrared Wireless Conference System would fit the Sicamous District Council and Chamber of Commerce perfectly.

TOA's TS-900/800 Series Conference System provides flexible adaptation to diverse conference styles, easy installation and has clear sound amplification. The system's infrared communication method has higher security by being resistant to radio interference and eavesdropping, plus it eliminates the need for connecting the conference units. Installation is quick without cumbersome cable arrangements. "The Sicamous District Council and Chamber of Commerce couldn't be more pleased with the system." stated John. "The set up of the system is extremely simple and the system performs great. TOA's TS-900/800 Infrared Wireless Conference System was exactly what the council was looking for."
