- F-2852C Wide-Dispersion Ceiling Speaker
- DA-250DH Multi-Channel Amplifiers
- M-9000M2 Preamplifier
- A-2000 Series Mixer Power Amplifier
- N-8000 Intercom System
- input modules

Purpose

The Ritz Carlton decided to redo the sound systems in their huge ballroom along with their luxurious spa, three dining rooms and two bars. Management felt that the sound quality need to be improved and have the sound customized for every zone throughout the hotel.

Challenge

This was a large project where TOA's design team worked closely with the integrator to get the job done right. With the different areas of the hotel needing an upgrade, it was challenging to incorporate the right speakers and amps that would satisfy the sounds needs of the room while at the same time not going overboard with the equipment. They also wanted speakers and they needed to be hidden or blend well with the hotel style.

Solution

The ballroom was outfitted with F-2852 ceiling speakers which disperse sound equally with the room. The speakers were controlled by the M-9000 preamplifier and powered by the DA250 power amplifier. In the smaller areas like the dining rooms, the versatile F-2352 were spread out for optimum coverage and sound clarity. They were driven by an A-2000 mixer power amplifier.

The Ritz Carlton has an underground parking facility that required a more secure access control. They chose TOA N-8000 IP intercom system. This allowed for the hotel and their patrons easy to use and reliable communications, especially for emergencies.

Feedback

The Ritz Carlton was excited to showoff their new sound systems in the hotel and believe customers will be happy with the sound quality.
