

INSTALLATION MANUAL

COMPUTER INTERFACE CI-600

To obtain optimum results from this computer interface, please follow instructions in this manual carefully. We suggest that you keep this manual handy for future reference.

■ GENERAL DESCRIPTION

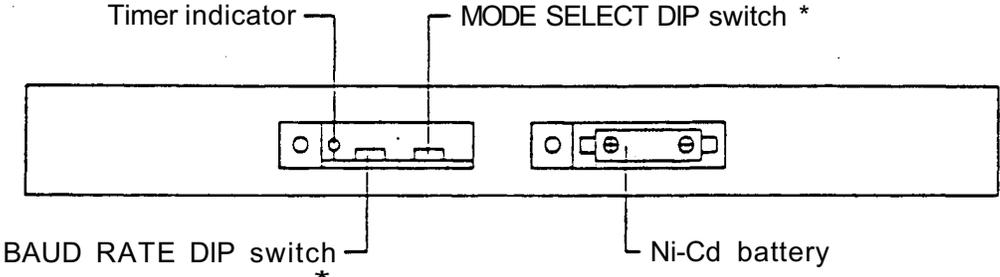

The Toa CI-600 Computer Interface is used in conjunction with the SI-62 Speech Interface and the EX-610, EX-620 or EX-630 exchange. Connected to a personal computer or data terminal, the CI-600 permits system programming, personal information display, release of fixed messages, etc.

■ PART NAMES

[Front-mounted facilities)

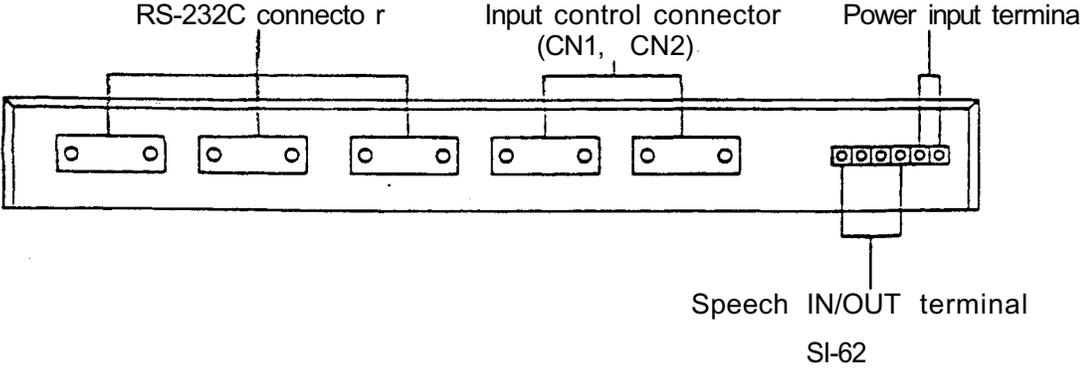

● CI-600 without cover

* Each DIP switch is OFF when put downward and ON when put upward, with the switch numbers 1 through 8 allocated left to right.

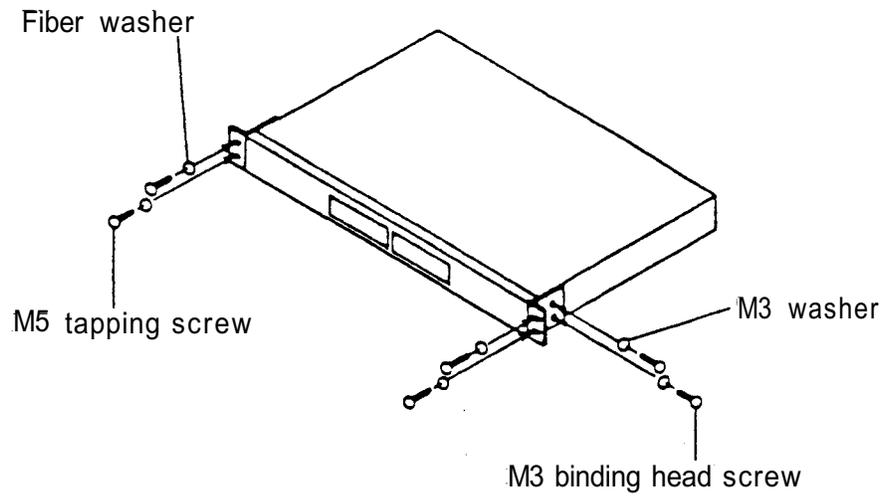

[Rear-mounted facilities)

■ INSTALLATION

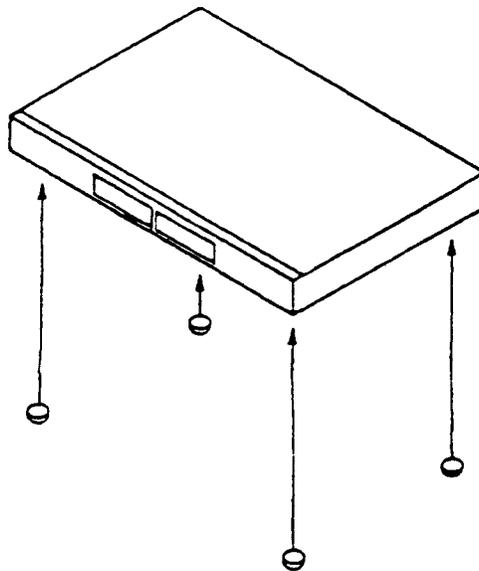

1. Rack mounting (exchange is mounted in an equipment rack.)

Attach the supplied brackets to the CI-600 to mount in a rack. See the figure.

2. Desk-top applications

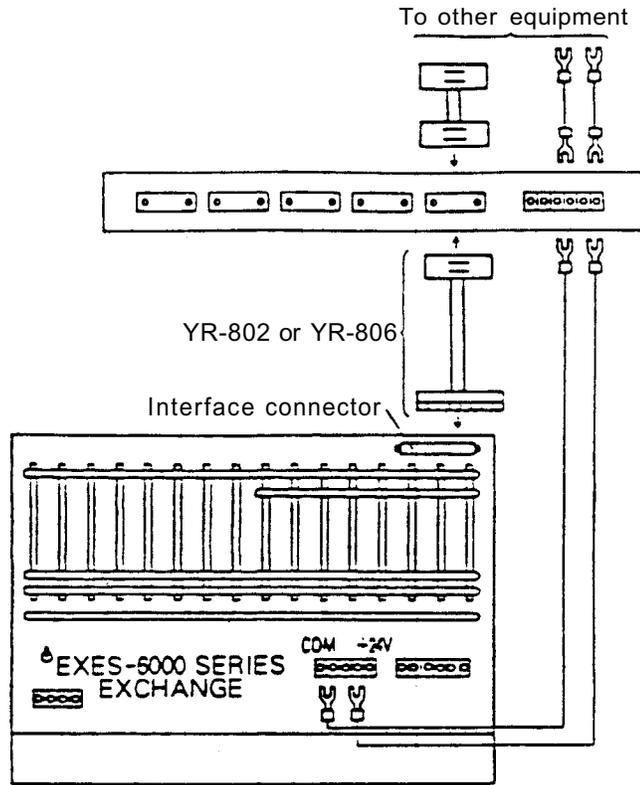

Attach the supplied rubber foot to the position indicated with a small hole (4 holes 2.4mm in diameter) in the bottom plate.

CONNECTION

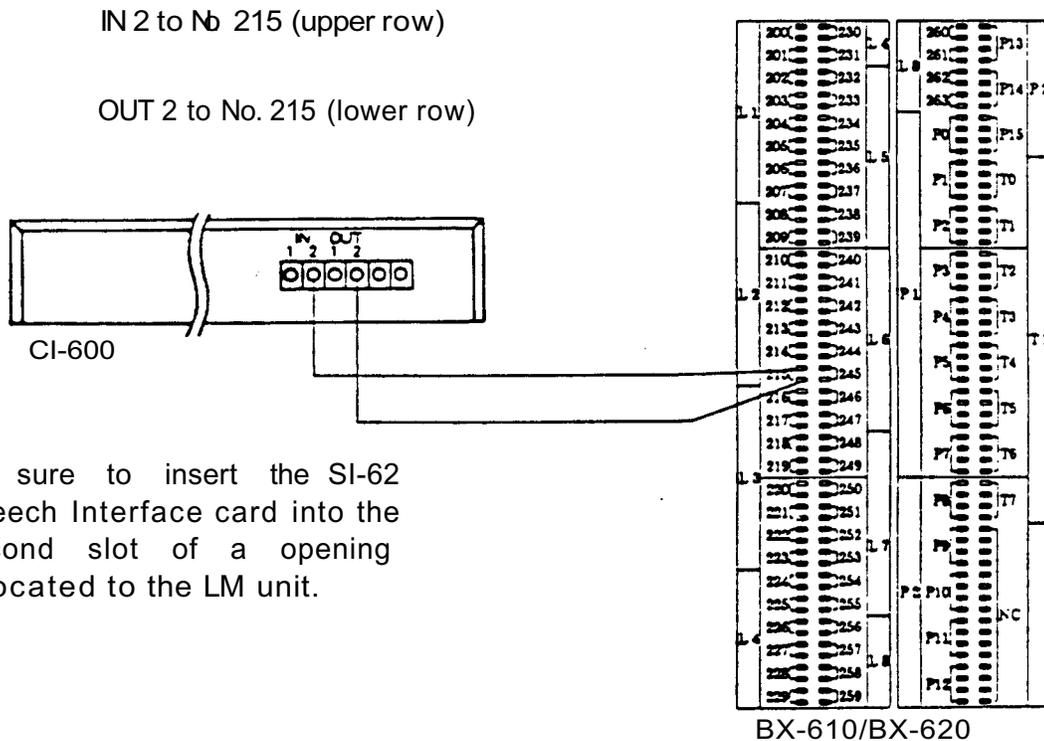

1. Input control connector and power supply

- Use the connection cable YR-806 (100cm in length) for connection between the CI-600 and exchange. When placing the CI-600 on the exchange, use the YR-802 cable (40cm).
- Use the YR-803 or YR-807 cable to connect the CI-600 to other equipment.
- For input control connector, use either CN-1 or CN-2. They are internally connected in parallel.

2. Speech IN/OUT terminals

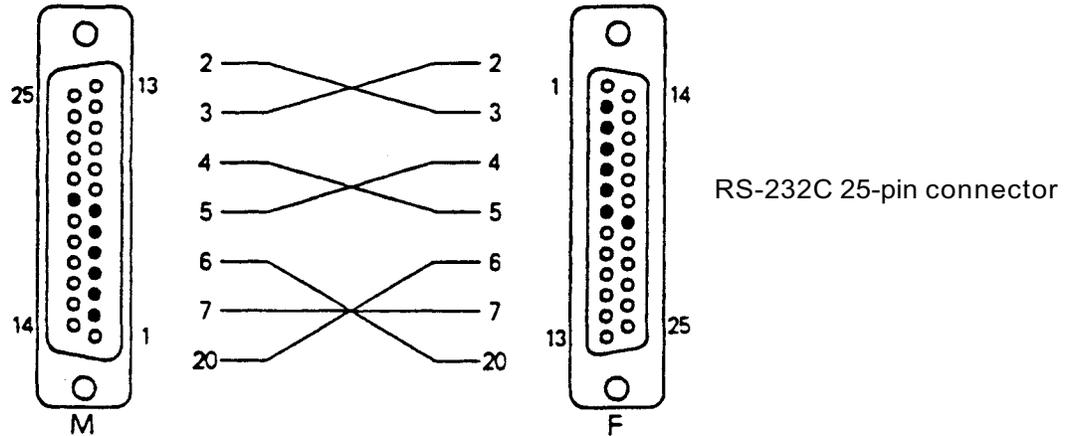

- Connect the IN/OUT terminals to the BX-610 or BX-620 terminal box as illustrated below.

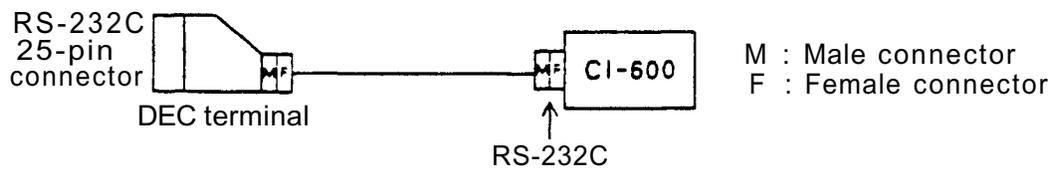

- Be sure to insert the SI-62 Speech Interface card into the second slot of a opening allocated to the LM unit.

3. RS-232C connector

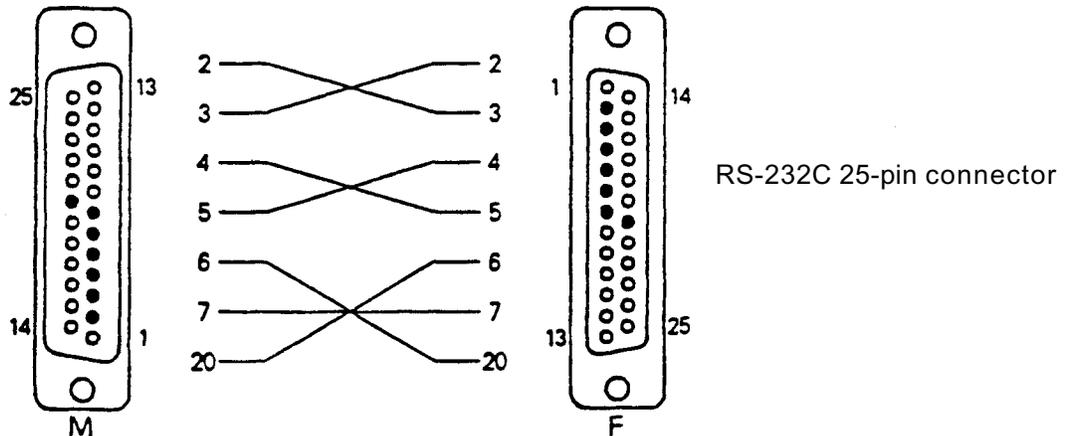

- Connection between CI-600 and DEC VT-100 terminal
Connect the DEC terminal and CI-600 using the appropriate cable for distance between the two. The type of connector is D-sub 25 pins (male) and D-sub 25 pin (female).

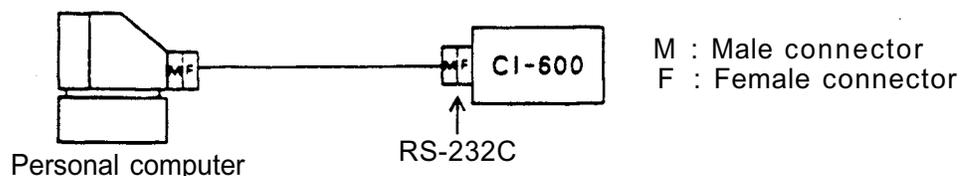

[Connection diagram]

- Connection between IBM personal computer and CI-600
Connect the IBM personal computer and CI-600 using the appropriate cable for distance between the two. The type of connector is D-sub 25 pins (male) and D-sub 25 pins (female).

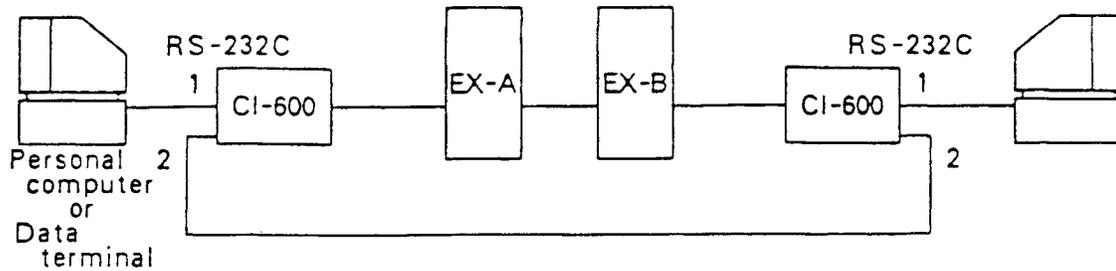

[Connection diagram]

- Connection between CI-600s (tie-line connection)

In a tie-line system, connect one CI-600's RS-232C connector No.2 to the same connector of another CI-600 only when initial set-up is performed.
(Refer to the operating instructions.)

[Connection diagram]

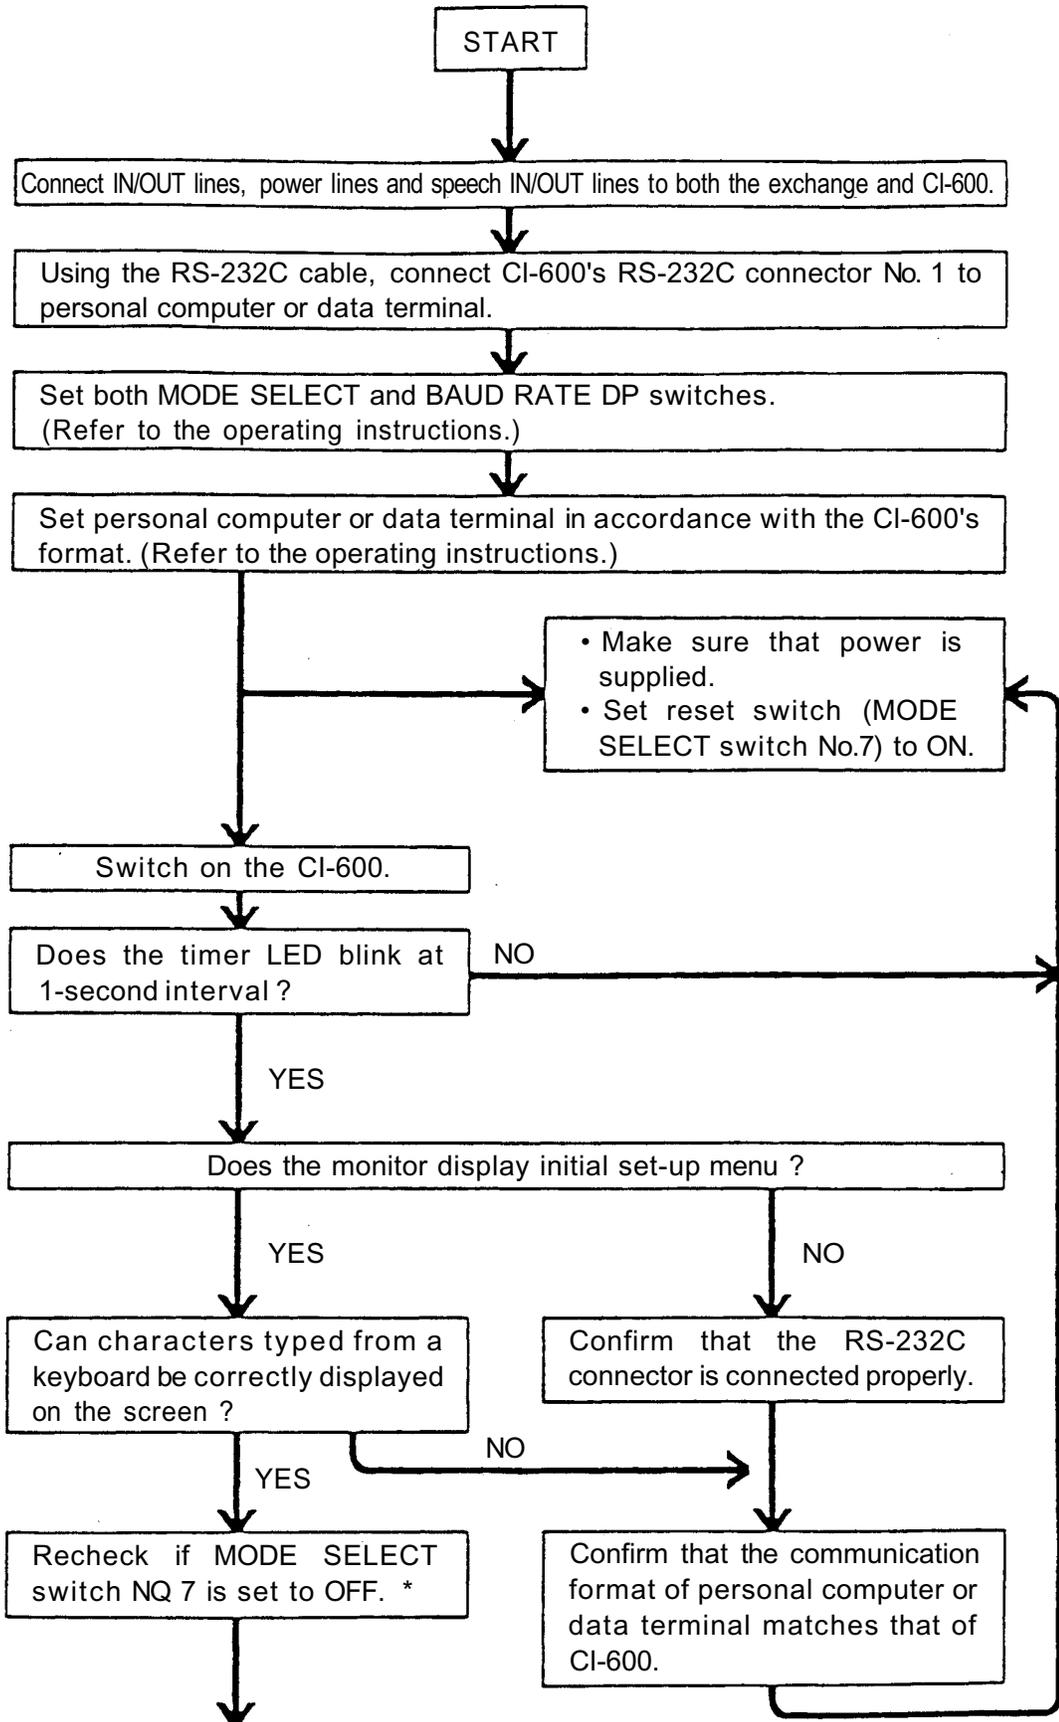

■ BACK-UP BATTERY

The Ni-Cd battery (GB50-3FA1) maintains the CI-600's stored data during power failure. Observe the following precautions.

- To keep the battery fully charged, do not switch power off for first 8 days after installing the CI-600. Once the battery has been fully charged, it maintains the stored data for about 10 days (at 25°C) even no power is supplied.
- Expected battery life is about 2 years (at 25°C). Replace the battery every 2 years.

■ INITIAL CHECK-UP OF CI-600

The section "Initial setting" of operating instructions.

*** IMPORTANT**
Leaving the switch on will cancel all the stored data when power is switched again.

■ SPECIFICATIONS

Operating power voltage	24V DC (20-28V)
Current consumption	Less than 300mA
Terminal capacity	3
IN-OUT connector/terminal	Interface bus 2 RS-232C 3 Speech IN/OUT/power unit 1
Standard	RS-232C
Message capacity	1.5-sec message × 10 0.75-sec message × 10 (Total 22 sec)
Recording & reproduction	ADM method
Ambient temperature	0°C-40°C
Dimensions	432(W)×44.5(H)×298CD)mm (17(W)×1.8(H)×11.7(D) inch)
Weight	3.3kg (7.3 lbs)

* Specifications are subject to change without notice.

■ ACCESSORIES

- Rack mounting bracket 2
- Rack mounting screw (M5×12) 4
- Fiber washer 4
- ⊕⊖ Binding head screw (M3×6) 4
- Washer (M3) 4
- Rubber foot 4
- Floppy disk 2
