

TOA Canada M-8080D Firmware Update Assessment Form

In May 2026, the firmware used in the M-8080D Series has been updated, introducing new features and compatibility with mobile applications (Android and iOS). Devices with control number D01 are delivered with the latest firmware and do not require an update. If your device has control number D00, it may be eligible for a firmware update.

Additional Notes to Consider:

- 1. After upgrading the firmware, all settings and presets will be erased and must be reprogrammed.
- 2. Devices with control number D00 produced in Lot 23L60 or later can be upgraded to the latest firmware version.
- 3. Devices with control number D00 produced before Lot 23L60 are not compatible with the latest firmware.
- 4. This control number can be understood as follows: [23][L][60]
[Last two digits of the year of production — i.e 2023]
[Month of production via alphanumeric indexing value — i.e L = Dec]
[Batch number — i.e this was the 60th unit of the batch manufactured]

This is an information gathering form only. Please fill out form with as much information as possible and email to technicalsupport@toacanada.com and wait for a formal response. Sections with Asterisk are mandatory fields. This form will be reviewed upon reception and the TOA technical support team will reach out with next steps.
